

# STANDING STONES

The standing stones were installed in September 2020. We chose them straight from the quarry at Marnhull Stone near Sturminster Newton.

The stone is from the Corallian group of limestones which are about 160 million years old and they were deposited during the Jurassic period between 145 and 201 million years ago, when the sea level was retreating!

The stones arrived on an articulated lorry

At least a third of each stone is underground

They were installed by our wonderful digger man, Kevin Holt
